Paint Finish Declaration and Maintenance & Care of your ARC Cabinetry

Paint Declaration

Paint finishes can magnify any properties of wood that are naturally inherent. Grain pattern, depressions, slight dents, and other imperfections can be noticeable. Because wood naturally expands and contracts, painted wood surfaces can show hairline stress cracks at joins and occasionally in the grain. Glazed finishes are intended to further enhance all of the above characteristics.

Things to Avoid

Keep all cabinet surface dry at all times using soft lint free cotton cloth. Excessive moisture and quick temperature changes can be harmful to the cabinet finish and strength.

Do not use dish cloth or sponge and avoid ammonia-based cleaners such as Windex and any harsh detergents. When in doubt of a cleaner's suitability, please do not use.

Always open or close any doors and drawers using pulls or handles and avoid touching wood surface.

Never use any scouring pads or powdered cleaners

Never hang wet towels inside cabinets or on doors.

Basic Cleaning

All ARC cabinet doors are shrink wrapped with clear film and we recommend removing this film after final installation to keep cabinets dust free.

For regular basic cleaning, use lint free cotton cloth dampened with warm water followed with dry cloth. Wipe up food spills and water spots immediately.

Glass doors and shelves can be cleaned with soft cloth moistened with mild glass cleaner taking care not to touch any wood surface.
